Tech commentaries:

The **Cometh USD** cryptocurrency price gained **0.82%** on the last trading day (Friday, 28th Jun 2024), rising from **\$4.55** to **\$4.58**. During the last trading day the cryptocurrency fluctuated **1.47%** from a day low at **\$4.55** to a day high of **\$4.61**. The price has risen in 5 of the last 10 days and is up by **2.67%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **2** more shares were traded than the day before. In total, **7** shares were bought and sold for approximately **\$32.08**.

The cryptocurrency lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the cryptocurrency is expected to fall **-25.83%** during the next 3 months and, with a 90% probability hold a price between **\$3.16** and **\$3.93** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

There are mixed signals in the cryptocurrency today. The **Cometh USD** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$4.59** and **\$4.97**. A break-up above any of these levels will issue buy signals. A buy signal was issued from a pivot bottom point on **Tuesday, June 18, 2024**, and so far it has risen 2.67%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **Cometh USD** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued.

Cometh USD finds support from accumulated volume at **\$4.55** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance from accumulated volume at **\$5.29**, **\$5.50** and **\$5.54**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$0.0668** between high and low, or **1.47%**. For the last week, the cryptocurrency has had daily average volatility of **1.06%**.

Cometh USD holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this cryptocurrency since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
