Tech commentaries:

The **Monash IVF Group Limited** stock price fell by **-3.66%** on the last day (Wednesday, 26th Jun 2024) from **\$1.37** to **\$1.32**. During the last trading day the stock fluctuated **4.56%** from a day low at **\$1.32** to a day high of **\$1.38**. The price has fallen in 5 of the last 10 days and is down by **-1.13%** for this period. Volume fell on the last day along with the stock, which is actually a good sign as volume should follow the stock. On the last day, the trading volume fell by **-308 thousand** shares and in total, **336 thousand** shares were bought and sold for approximately **\$442.14 thousand**.

The stock has broken the falling short-term trend down. Firstly a stronger fallrate is indicated, but false breaks and "sell-off" may occur. However, a further fall is realistic and any reactions back to the breaking point (**\$1.36**) are considered to be a "second chance" to get out. According to the fan-theory **\$1.27** will represent the new bottom line of the next trend, but it is far too early to say this for certain.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Monash IVF Group Limited** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$1.35** and **\$1.41**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, May 07, 2024**, and so far it has fallen -13.49%. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this stock may have low liquidity in periods, which increases the general risk.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$1.34**, **\$1.37** and **\$1.46**.

This stock has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the stock moved **\$0.0600** between high and low, or **4.56%**. For the last week the stock has had daily average volatility of **3.48%**.

Monash IVF Group Limited holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Medium**

Evaluation: **Sell Candidate**
