## Tech commentaries:

The **The NAGA Group AG** stock price fell by **-6.22%** on the last day (Friday, 31st May 2024) from **0.90€** to **0.84€**. During the last trading day the stock fluctuated **13.86%** from a day low at **0.81€** to a day high of **0.92€**. The price has fallen in 6 of the last 10 days but is still up by **4.98%** over the past 2 weeks. Volume has increased on the last day by **41 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **55 thousand** shares were bought and sold for approximately **46.11€** thousand.

The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-7.13%** during the next 3 months and, with a 90% probability hold a price between **0.503€** and **0.99€** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **The NAGA Group AG** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **0.86€** and **0.85€**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Monday, March 18, 2024**, and so far it has fallen **-25.96%**. Further fall is indicated until a new bottom pivot has been found. **The NAGA Group AG** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

**The NAGA Group AG** finds support from accumulated volume at **0.81€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **0.85€, 0.88€** and **0.95€**.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **0.112€** between high and low, or **13.86%**. For the last week, the stock has had daily average volatility of **21.37%**.

**The NAGA Group AG** holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **High**

Evaluation: **Sell Candidate**
