The price has fallen in 5 of the last 10 days and is down by **-1.48%** for this period. The stock lies in the middle of a narrow and falling trend in the short term and further fall within the trend is signaled. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Thursday, April 18, 2024**, and so far it has risen 0.412%. Further rise is indicated until a new top pivot has been found. **Nuveen Build America Bond Fund** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Nuveen Build America Bond Fund** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$14.63** and **\$15.10**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Nuveen Build America Bond Fund finds support from accumulated volume at **\$14.58** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$15.21**, **\$15.33** and **\$16.20**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.0800** between high and low, or **0.547%**. For the last week the stock has had daily average volatility of **0.790%**.
