Tech commentaries:

The **National Bank Holdings Corporation** stock price fell by **-1.89%** on the last day (Tuesday, 30th Apr 2024) from **\$33.36** to **\$32.73**. It has now fallen 5 days in a row. During the last trading day the stock fluctuated **1.84%** from a day low at **\$32.69** to a day high of **\$33.29**. The price has fallen in 6 of the last 10 days but is still up by **1.33%** over the past 2 weeks. Volume has increased on the last day by **58 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **158 thousand** shares were bought and sold for approximately **\$5.16** million.

The stock is at the lower part of a horizontal trend in the short term, and normally this may pose a good buying opportunity, though a breakdown through the bottom trend line at **\$32.27** will give a strong sell signal and a trend shift may be expected. Given the current horizontal trend, you can expect **National Bank Holdings Corporation** stock with a 90% probability to be traded between **\$32.07** and **\$34.58** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **National Bank Holdings Corporation** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$33.77** and **\$34.16**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, April 23, 2024**, and so far it has fallen **-5.95%**. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

National Bank Holdings Corporation finds support from accumulated volume at **\$32.58** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$33.46**, **\$34.51** and **\$35.51**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **\$0.600 (1.84%)** between high and low. For the last week, the stock has had daily average volatility of **2.54%**.

National Bank Holdings Corporation holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Sell Candidate**
