Tech commentaries:

The **National Grid Transco PLC** stock price gained **0.575%** on the last trading day (Thursday, 28th Mar 2024), rising from **\$67.83** to **\$68.22**. During the last trading day the stock fluctuated **0.603%** from a day low at **\$67.97** to a day high of **\$68.38**. The price has risen in 6 of the last 10 days and is up by **1.14%** over the past 2 weeks. Volume fell on the last day by **-7 thousand** shares and in total, **280** thousand shares were bought and sold for approximately **\$19.10** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$68.76** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **National Grid Transco PLC** stock with a 90% probability to be traded between **\$63.45** and **\$68.58** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are mixed signals in the stock today. A sell signal was issued from a pivot top point on **Friday, March 08, 2024**, and so far it has fallen **-0.84%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). The **National Grid Transco PLC** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$67.95** and **\$66.83**. A breakdown below any of these levels will issue sell signals. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

National Grid Transco PLC finds support from accumulated volume at **\$66.70** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$68.58**, **\$68.80** and **\$68.98**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.410** between high and low, or **0.603%**. For the last week the stock has had daily average volatility of **1.09%**.

National Grid Transco PLC holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
