Tech commentaries:

The **Oil-Dri Corporation Of America** stock price gained **1.24%** on the last trading day (Monday, 29th Apr 2024), rising from **\$68.75** to **\$69.60**. During the last trading day the stock fluctuated **1.52%** from a day low at **\$69.00** to a day high of **\$70.05**. The price has risen in 7 of the last 10 days and is up by **0.87%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **4 thousand** more shares were traded than the day before. In total, **12 thousand** shares were bought and sold for approximately **\$803.95** thousand.

The stock lies in the lower part of a wide and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$67.85** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **6.49%** during the next 3 months and, with a 90% probability hold a price between **\$72.26** and **\$82.86** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Thursday, April 25, 2024**, and so far it has risen 2.81%. Further rise is indicated until a new top pivot has been found. **Oil-Dri Corporation Of America** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Oil-Dri Corporation Of America** stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **\$70.97**. On a fall, the stock will find some support from the short-term average at **\$69.25**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Oil-Dri Corporation Of America finds support from accumulated volume at **\$69.48** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$71.09**, **\$71.86** and **\$76.05**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$1.05** between high and low, or **1.52%**. For the last week the stock has had daily average volatility of **1.46%**.

Oil-Dri Corporation Of America holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Sell Candidate**
