Tech commentaries:

The **Oxford Lane Capital Corp.** stock price gained **0.739%** on the last trading day (Tuesday, 2nd Jul 2024), rising from **\$5.41** to **\$5.45**. During the last trading day the stock fluctuated **1.29%** from a day low at **\$5.41** to a day high of **\$5.48**. The price has been going up and down for this period, and there has been a **0.37%** gain for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **360 thousand** more shares were traded than the day before. In total, **4 million** shares were bought and sold for approximately **\$21.68** million.

The stock lies in the lower part of a strong rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$5.39** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **11.15%** during the next 3 months and, with a 90% probability hold a price between **\$6.00** and **\$6.49** at the end of this 3-month period.

The **Oxford Lane Capital Corp.** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$5.43** and **\$5.45**. A breakdown below any of these levels will issue sell signals. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Friday, June 07, 2024**, and so far it has fallen **-4.22%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Oxford Lane Capital Corp. finds support from accumulated volume at **\$5.43** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$5.46**, **\$5.50** and **\$5.60**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.0700** between high and low, or **1.29%**. For the last week the stock has had daily average volatility of **0.96%**.

Oxford Lane Capital Corp. holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
