Tech commentaries:

The **Pacific USD** cryptocurrency price fell by **-1.70%** on the last day (Saturday, 29th Jun 2024) from **\$0.0002** to **\$0.0002**. It has now fallen 4 days in a row. During the last trading day the cryptocurrency fluctuated **12.55%** from a day low at **\$0.0002** to a day high of **\$0.0003**. The price has fallen in 7 of the last 10 days and is down by **-2.12%** for this period. Volume fell on the last day along with the cryptocurrency, which is actually a good sign as volume should follow the cryptocurrency. On the last day, the trading volume fell by **-107** shares and in total, **14** thousand shares were bought and sold for approximately **\$3.25**.

The cryptocurrency is at the lower part of a wide and horizontal trend in the short term, and normally this may pose a good buying opportunity, though a breakdown through the bottom trend line at **\$0.0002** will give a strong sell signal and a trend shift may be expected. Given the current horizontal trend, you can expect **Pacific USD** cryptocurrency with a 90% probability to be traded between **\$0.0002** and **\$0.0003** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and cryptocurrencies seldom manage to go directly from the bottom of a trend up to the top. Cryptocurrencies turning up in the middle of a horizontal trend are therefore considered to be potential runners.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Pacific USD** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0002** and **\$0.0002**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, May 30, 2024**, and so far it has fallen **-17.50%**. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day which is technical positive. One should, however, note that this cryptocurrency may have low liquidity in periods, which increases the general risk. The very low volume increases the risk and reduces the other technical signals issued.

Pacific USD finds support from accumulated volume at **\$0.0002** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance from accumulated volume at **\$0.0002**, **\$0.0003** and **\$0.0003**.

This cryptocurrency has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the cryptocurrency moved **\$0.000029** between high and low, or **12.55%**. For the last week the cryptocurrency has had daily average volatility of **3.80%**.

Pacific USD holds several negative signals and is within a wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this cryptocurrency.

Risk: **Medium**

Evaluation: **Sell Candidate**
