The price has been going up and down for this period, and there has been a 0.2% gain for the last 2 weeks. Volume has increased on the last day by **10 thousand** shares but on falling prices. The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. A buy signal was issued from a pivot bottom point on **Monday, April 15, 2024**, and so far it has risen 0.497%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). The **Potbelly Corporation** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$10.55** and **\$11.10**. A break-up above any of these levels will issue buy signals. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

**Potbelly Corporation** finds support from accumulated volume at **\$10.10** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested.
