The stock lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

This does not cause any direct divergence but may be an early warning and a possible "turning point".

On the upside the stock meets some resistance just above today's level from accumulated volume at **\$9.68**, **\$9.85** and **\$9.89**.
