Tech commentaries:

The **Power Ledger / US Dollar** cryptocurrency price fell by **-1.56%** on the last day (Friday, 28th Jun 2024) from **\$0.219** to **\$0.216**. During the last trading day the cryptocurrency fluctuated **3.56%** from a day low at **\$0.214** to a day high of **\$0.221**. The price has been going up and down for this period, and there has been a 6.57% gain for the last 2 weeks. Volume has increased on the last day by **1 million** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **7 million** shares were bought and sold for approximately **\$1.57 million**.

The cryptocurrency lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the cryptocurrency is expected to fall **-33.05%** during the next 3 months and, with a 90% probability hold a price between **\$0.125** and **\$0.201** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Tuesday, June 18, 2024**, and so far it has risen 6.57%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Power Ledger / US Dollar** cryptocurrency holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the cryptocurrency giving a more negative forecast for the stock. On further gains, the cryptocurrency will meet resistance from the long-term Moving Average at **\$0.260**. On a fall, the cryptocurrency will find some support from the short-term average at **\$0.213**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Volume rose on falling prices yesterday. This may be an early warning and the cryptocurrency should be followed more closely.

Power Ledger / US Dollar finds support from accumulated volume at **\$0.213** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.219**, **\$0.222** and **\$0.268**.

This cryptocurrency may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this cryptocurrency is considered to be "high risk". During the last day, the cryptocurrency moved **\$0.0076** between high and low, or **3.56%**. For the last week, the cryptocurrency has had daily average volatility of **4.70%**.

Power Ledger / US Dollar holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this cryptocurrency.

Risk: **High**

Evaluation: **Sell Candidate**
