Tech commentaries:

The **Privatix USD** cryptocurrency price gained **0.590%** on the last trading day (Saturday, 29th Jun 2024), rising from **\$0.0298** to **\$0.0300**. During the last trading day the cryptocurrency fluctuated **0.92%** from a day low at **\$0.0299** to a day high of **\$0.0301**. The price has fallen in 6 of the last 10 days but is still up by **2.88%** over the past 2 weeks.

The cryptocurrency lies the upper part of a very wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **\$0.0322** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Due to the high volatility and the trend direction we are not able to give forecast range for this stock. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Privatix USD** cryptocurrency holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the cryptocurrency has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$0.0261** and **\$0.0296**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Thursday, June 27, 2024**, and so far it has risen 144.33%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

On the downside, the cryptocurrency finds support just below today's level from accumulated volume at **\$0.0281** and **\$0.0279**. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.0301**, **\$0.0305** and **\$0.0316**.

In general the cryptocurrency tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the cryptocurrency During the last day, the cryptocurrency moved **\$0.0003** between high and low, or **0.92%**. For the last week the cryptocurrency has had daily average volatility of **56.61%**

Privatix USD holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
