## Tech commentaries:

No changes to the price of **PrivaCoin USD** cryptocurrency on the last trading day (Wednesday, 26th Jun 2024). During the last trading day the cryptocurrency fluctuated **0.129%** from a day low at **\$0.0008** to a day high of **\$0.0008**. The price has risen in 4 of the last 10 days.

The cryptocurrency is at the lower part of a narrow and horizontal trend in the short term, and normally this may pose a good buying opportunity, though a breakdown through the bottom trend line at **\$0.0008** will give a strong sell signal and a trend shift may be expected. Given the current horizontal trend, you can expect **PrivaCoin USD** cryptocurrency with a 90% probability to be traded between **\$0.0008** and **\$0.0008** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and cryptocurrencies seldom manage to go directly from the bottom of a trend up to the top. Cryptocurrencies turning up in the middle of a horizontal trend are therefore considered to be potential runners.

A buy signal was issued from a pivot bottom point on **Monday, June 24, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **PrivaCoin USD** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0008** and **\$0.0008**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the cryptocurrency may perform very badly in the next couple of days. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.0008**, **\$0.0008** and **\$0.0008**.

In general the cryptocurrency tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the cryptocurrency. During the last day, the cryptocurrency moved **\$0.000001** between high and low, or **0.129%**. For the last week the cryptocurrency has had daily average volatility of **0.463%**

**PrivaCoin USD** holds several negative signals and is within a narrow and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this cryptocurrency.

Risk: **Low**

Evaluation: **Sell Candidate**
