Tech commentaries:

The **PTC Therapeutics** stock price gained **12.50%** on the last trading day (Monday, 29th Apr 2024), rising from **\$28.57** to **\$32.14**. It has now gained 3 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **12.03%** from a day low at **\$29.11** to a day high of **\$32.61**. The price has been going up and down for this period, and there has been a 25.16% gain for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **120 thousand** more shares were traded than the day before. In total, **2 million** shares were bought and sold for approximately **\$52.09** million.

The stock lies in the upper part of a very wide and weak rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break-up at the top trend line at **\$32.53** will firstly indicate a stronger rate of rising. Given the current short-term trend, the stock is expected to rise **2.84%** during the next 3 months and, with a 90% probability hold a price between **\$25.49** and **\$33.45** at the end of this 3-month period.

Mostly positive signals in the chart today. The **PTC Therapeutics** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$26.87** and **\$28.00**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Thursday, April 18, 2024**, and so far it has risen 30.17%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

PTC Therapeutics finds support from accumulated volume at \$31.95 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$3.50** between high and low, or **12.03%**. For the last week, the stock has had daily average volatility of **8.39%**.

Several short-term signals, along with a general good trend, are positive and we conclude that the current level may hold a buying opportunity as there is a fair chance for **PTC Therapeutics** stock to perform well in the short-term.

Risk: **Medium**

Evaluation: **Buy Candidate**
