Tech commentaries:

No changes to the price of **RIVERFRONT DYNAMIC US FLEX-CAP** ETF on the last trading day (Wednesday, 26th Jun 2024). During the last trading day the ETF fluctuated **0%** from a day low at **\$54.29** to a day high of **\$54.29**. The price has been going up and down for this period, and there has been a 1.51% gain for the last 2 weeks.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **5.46%** during the next 3 months and, with a 90% probability hold a price between **\$55.89** and **\$57.93** at the end of this 3-month period.

The **RIVERFRONT DYNAMIC US FLEX-CAP** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$54.18** and **\$53.20**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, June 25, 2024**, and so far it has fallen **0%**. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

RIVERFRONT DYNAMIC US FLEX-CAP finds support from accumulated volume at \$54.00 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the ETF may perform very well during the next couple of days.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.0590%**

RIVERFRONT DYNAMIC US FLEX-CAP holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
