## Tech commentaries:

The **Rio Tinto** stock price fell by **-0.602%** on the last day (Tuesday, 2nd Jul 2024) from **\$66.41** to **\$66.01**. During the last trading day the stock fluctuated **1.10%** from a day low at **\$65.30** to a day high of **\$66.02**. The price has risen in 7 of the last 10 days and is up by **0.03%** over the past 2 weeks. Volume fell on the last day along with the stock, which is actually a good sign as volume should follow the stock. On the last day, the trading volume fell by **-267 thousand** shares and in total, **2 million** shares were bought and sold for approximately **\$112.77** million.

The stock is at the lower part of a wide and horizontal trend in the short term, and normally this may pose a good buying opportunity, though a breakdown through the bottom trend line at **\$65.87** will give a strong sell signal and a trend shift may be expected. Given the current horizontal trend, you can expect **Rio Tinto** stock with a 90% probability to be traded between **\$66.77** and **\$75.11** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are mixed signals in the stock today. The **Rio Tinto** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$66.28** and **\$68.76**. A break-up above any of these levels will issue buy signals. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements. A buy signal was issued from a pivot bottom point on **Thursday, June 27, 2024**, and so far it has risen 0.289%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD).

**Rio Tinto** finds support from accumulated volume at **\$65.99** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$66.08**, **\$66.51** and **\$71.91**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.720** between high and low, or **1.10%**. For the last week the stock has had daily average volatility of **0.99%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Rio Tinto** stock to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
