## Tech commentaries:

The **Rhino Resource Partners, L.P.** stock price gained **0.207%** on the last trading day (Monday, 29th Apr 2024), rising from **£48.40** to **£48.50**. During the last trading day the stock fluctuated **4.83%** from a day low at **£47.60** to a day high of **£49.90**. The price has risen in 7 of the last 10 days and is up by **16.87%** over the past 2 weeks. Volume fell on the last day by **-124 thousand** shares and in total, **607** thousand shares were bought and sold for approximately **£29.44** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

Given the current horizontal trend, you can expect **Rhino Resource Partners, L.P.** stock with a 90% probability to be traded between **£36.21** and **£48.60** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

Mostly positive signals in the chart today. The **Rhino Resource Partners, L.P.** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£47.11** and **£40.33**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, March 22, 2024**, and so far it has risen 34.35%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

On the downside, the stock finds support just below today's level from accumulated volume at **£45.40** and **£42.00**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **£2.30** between high and low, or **4.83%**. For the last week, the stock has had daily average volatility of **4.80%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Rhino Resource Partners, L.P.** stock to perform well in the short-term period.

**Risk: High**

**Evaluation: Buy Candidate**
