Tech commentaries:

No changes to the price of **ReNew Energy Global plc** stock on the last trading day (Friday, 10th May 2024). During the last trading day the stock fluctuated **2.09%** from a day low at **\$6.00** to a day high of **\$6.12**. The price has risen in 5 of the last 10 days and is up by **9.07%** over the past 2 weeks.

The stock lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-12.45%** during the next 3 months and, with a 90% probability hold a price between **\$4.43** and **\$5.52** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **ReNew Energy Global plc** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **\$6.05**. On a fall, the stock will find some support from the long-term average at approximately **\$5.82**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, May 06, 2024**, and so far it has fallen -5.50%. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point".

ReNew Energy Global plc finds support from accumulated volume at **\$6.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$6.18**, **\$6.31** and **\$6.40**.

This stock has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the stock moved **\$0.125** between high and low, or **2.09%**. For the last week the stock has had daily average volatility of **2.92%**.

ReNew Energy Global plc holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
