Volume: Sell
MACD: Buy

Tech commentaries:

No changes to the price of **Restart SIQ S.p.A.** stock on the last trading day (Friday, 17th May 2024). During the last trading day the stock fluctuated **0%** from a day low at **0.111€** to a day high of **0.111€**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock has broken the very wide and falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **0.108€**, a level that may pose a second chance to hit a runner. According to fan-theory **0.142€** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

There are mixed signals in the stock today. The **Restart SIQ S.p.A.** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **0.111€** and **0.121€**. A break-up above any of these levels will issue buy signals. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued. A buy signal was issued from a pivot bottom point on **Thursday, May 02, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD).

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. On the upside the stock meets some resistance from accumulated volume at **0.127€**, **0.128€** and **0.132€**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **0€** between high and low, or **0%**. For the last week the stock has had daily average volatility of **0%**.

Restart SIQ S.p.A. holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
