Tech commentaries:

The **Invesco Alerian Galaxy Crypto Economy** ETF price fell by **-2.33%** on the last day (Friday, 28th Jun 2024) from **\$16.30** to **\$15.92**. During the last trading day the ETF fluctuated **2.38%** from a day low at **\$15.88** to a day high of **\$16.26**. The price has fallen in 6 of the last 10 days and is down by **-2.27%** for this period. Volume has increased on the last day by **107** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **2** thousand shares were bought and sold for approximately **\$29.37** thousand.

The ETF lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **26.98%** during the next 3 months and, with a 90% probability hold a price between **\$18.05** and **\$22.01** at the end of this 3-month period.

A sell signal was issued from a pivot top point on **Monday, June 17, 2024**, and so far it has fallen **-5.58%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Invesco Alerian Galaxy Crypto Economy** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued. Some positive signals were issued as well, and these may have some influence on the near short-term development. The **Invesco Alerian Galaxy Crypto Economy** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **\$16.12**. On a fall, the ETF will find some support from the long-term average at approximately **\$14.76**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal.

On the downside, the ETF finds support just below today's level from accumulated volume at **\$13.75** and **\$11.98**. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$16.29**, **\$16.61** and **\$16.86**.

This ETF has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the ETF moved **\$0.377** between high and low, or **2.38%**. For the last week, the ETF has had daily average volatility of **2.64%**.

Several of the signals/indicators are negative, and we believe that this will affect on the development for the next days and maybe possible weeks. However, over time, we think that today's level holds a possible buying opportunity and that the price will be higher during or at the end of this 3-month period.

Risk: **Medium**

Evaluation: **Buy Candidate**
