Tech commentaries:

The **Seacoast Banking Corporation of Florida** stock price gained **1.70%** on the last trading day (Thursday, 2nd May 2024), rising from **\$23.51** to **\$23.91**. During the last trading day the stock fluctuated **2.14%** from a day low at **\$23.60** to a day high of **\$24.10**. The price has risen in 6 of the last 10 days and is up by **6.41%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **24 thousand** more shares were traded than the day before. In total, **371 thousand** shares were bought and sold for approximately **\$8.86 million**.

The stock has broken the falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **\$23.84**, a level that may pose a second chance to hit a runner. According to fan-theory **\$25.92** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

The **Seacoast Banking Corporation of Florida** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$23.57** and **\$23.74**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, April 23, 2024**, and so far it has fallen **-0.416%**. Further fall is indicated until a new bottom pivot has been found.

Seacoast Banking Corporation of Florida finds support from accumulated volume at **\$23.90** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$23.98**, **\$24.23** and **\$24.31**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.505** between high and low, or **2.14%**. For the last week, the stock has had daily average volatility of **3.08%**.

Seacoast Banking Corporation of Florida holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
