MACD: Buy

Tech commentaries:

No changes to the price of **Shih Tzu USD** cryptocurrency on the last trading day (Thursday, 16th May 2024). During the last trading day the cryptocurrency fluctuated **0%** from a day low at **\$0.00000000** to a day high of **\$0.00000000**. The price has risen in 5 of the last 10 days but is still down by **-41.32%** for this period.

The cryptocurrency is moving within a very wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Shih Tzu USD** cryptocurrency with a 90% probability to be traded between **\$0.00000000** and **\$0.00000000** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and cryptocurrencies seldom manage to go directly from the bottom of a trend up to the top. Cryptocurrencies turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Shih Tzu USD** cryptocurrency holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the cryptocurrency giving a positive forecast for the stock. On further gains, the cryptocurrency will meet resistance from the short-term Moving Average at approximately **\$0.00000000**. On a fall, the cryptocurrency will find some support from the long-term average at approximately **\$0.00000000**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Wednesday, May 15, 2024**, and so far it has fallen 0%. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

On the downside, the cryptocurrency finds support just below today's level from accumulated volume at **\$0.00000000** and **\$0.00000000**. On the upside the cryptocurrency meets some resistance from accumulated volume at **\$0.00000000**, **\$0.00000000** and **\$0.00000000**.

In general the cryptocurrency tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the cryptocurrency. During the last day, the cryptocurrency moved **\$0** between high and low, or **0%**. For the last week the cryptocurrency has had daily average volatility of **6.04%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Shih Tzu USD** cryptocurrency to perform well in the short-term period. We have upgraded our analysis conclusion for this cryptocurrency since the last evaluation from a Hold/Accumulate to a Buy candidate.

Risk: Low

Evaluation: Buy Candidate
