Tech commentaries:

The First Sensor AG stock price gained 0.332% on the last trading day (Friday, 28th Jun 2024), rising from 60.20€ to 60.40€ It has now gained 4 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated 1.34% from a day low at 59.60€to a day high of 60.40€ The price has risen in 6 of the last 10 days and is up by 1.34% over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, 14 more shares were traded than the day before. In total, 250 shares were bought and sold for approximately 15.10€thousand.

The stockis at the upper part of a narrow and horizontal trend and normally this may pose a good selling opportunity but a breakup through the top trend line at 60.97€ will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect First Sensor AG stock with a 90% probability to be traded between 58.81€ and 61.74€ at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The First Sensor AG stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at 59.03€and 59.67€ A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on Thursday, June 20, 2024, and so far it has risen 4.14%. Further rise is indicated until a new top pivot has been found. First Sensor AG has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

First Sensor AG finds support from accumulated volume at 60.00€ and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at 60.60€

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved 0.800€ between high and low, or 1.34%. For the last week the stock has had daily average volatility of 1.72%.

First Sensor AG holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: Low
