MACD:	Sell

Tech commentaries:

The **S Physical Silver** ETF price fell by **-0.627%** on the last day (Friday, 3rd May 2024) from **\$25.50** to **\$25.34**. During the last trading day the ETF fluctuated **1.80%** from a day low at **\$24.99** to a day high of **\$25.44**. The price has fallen in 6 of the last 10 days and is down by **-7.65%** for this period. Volume has increased on the last day by **115 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **1 million** shares were bought and sold for approximately **\$32.15** million.

Given the current short-term trend, the ETF is expected to rise **26.93%** during the next 3 months and, with a 90% probability hold a price between **\$32.16** and **\$36.85** at the end of this 3-month period.

There are few to no technical positive signals at the moment. The **S Physical Silver** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$25.67** and **\$25.51**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Monday, April 15, 2024**, and so far it has fallen -8.32%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume rose on falling prices yesterday. This may be an early warning and the ETF should be followed more closely.

S Physical Silver finds support from accumulated volume at \$24.96 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$25.65**, **\$26.82** and **\$27.64**.

This ETF has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the ETF moved **\$0.450** between high and low, or **1.80%**. For the last week, the ETF has had daily average volatility of **1.86%**.

The S Physical Silver ETF holds several negative signals and despite the positive trend, we believe **S Physical Silver** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Buy to a Sell candidate.

Risk: **Medium**

Evaluation: **Sell Candidate**
