Tech commentaries:

No changes to the price of **S.P. Apparels Limited** stock on the last trading day (Wednesday, 1st May 2024). During the last trading day the stock fluctuated **0%** from a day low at **591.20** to a day high of **591.20**. The price has fallen in 5 of the last 10 days but is still up by **1.83%** over the past 2 weeks.

The stock is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **S.P. Apparels Limited** stock with a 90% probability to be traded between **514.24** and **617.01** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **S.P. Apparels Limited** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **589.55** and **582.47**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Monday, April 29, 2024**, and so far it has risen 1.13%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

S.P. Apparels Limited finds support from accumulated volume at **563.80** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **593.60**, **597.80** and **621.40**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **0%** between high and low, or **0%**. For the last week the stock has had daily average volatility of **3.36%**.

S.P. Apparels Limited holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: Low

Evaluation: Hold/Accumulate
