The stock lies in the upper part of a wide and weak rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. Given the current short-term trend, the stock is expected to rise **3.91%** during the next 3 months and, with a 90% probability hold a price between **\$25.96** and **\$29.08** at the end of this 3-month period.

This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, May 09, 2024**, and so far it has fallen -1.76%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).
