A buy signal was issued from a pivot bottom point on **Thursday, April 18, 2024**, and so far it has risen 3.59%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **SPDR(R) PORTFOLIO MID CAP SPDR(R) ETF** holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **\$51.43**. On a fall, the ETF will find some support from the short-term average at **\$50.72**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal.

**SPDR(R) PORTFOLIO MID CAP SPDR(R)** finds support from accumulated volume at **\$50.18** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested.
