## Tech commentaries:

The **SPDR(R) BLOOMBERG BARCLAYS SHORT TERM** stock price gained **1.13%** on the last trading day (Tuesday, 30th Apr 2024), rising from **£1,325.00** to **£1,340.00**. During the last trading day the stock fluctuated **1.75%** from a day low at **£1,326.80** to a day high of **£1,350.00**. The price has been going up and down for this period, and there has been a **0.75%** gain for the last 2 weeks. Volume fell on the last day by **-11 thousand** shares and in total, **9 thousand** shares were bought and sold for approximately **£12.29** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **£1,349.64** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **SPDR(R) BLOOMBERG BARCLAYS SHORT TERM** stock with a 90% probability to be traded between **£1,247.05** and **£1,324.35** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **SPDR(R) BLOOMBERG BARCLAYS SHORT TERM** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£1,335.71** and **£1,316.36**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, April 18, 2024**, and so far it has fallen **-0.741%**. Further fall is indicated until a new bottom pivot has been found.

**SPDR(R) BLOOMBERG BARCLAYS SHORT TERM** finds support from accumulated volume at **£1,330.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **£1,345.00**, **£1,350.00** and **£1,365.00**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **£23.20** between high and low, or **1.75%**. For the last week the stock has had daily average volatility of **1.18%**.

**SPDR(R) BLOOMBERG BARCLAYS SHORT TERM** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.
