Tech commentaries:

No changes to the price of **Pimco Short-term High Yield Corporate** ETF on the last trading day (Thursday, 27th Jun 2024). During the last trading day the ETF fluctuated **0%** from a day low at **\$145.93** to a day high of **\$145.93**. The price has fallen in 6 of the last 10 days and is down by **-0.25%** for this period.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **2.27%** during the next 3 months and, with a 90% probability hold a price between **\$148.38** and **\$150.40** at the end of this 3-month period.

The **Pimco Short-term High Yield Corporate** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **\$146.32**. On a fall, the ETF will find some support from the long-term average at approximately **\$145.72**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Friday, June 21, 2024**, and so far it has fallen **-0.654%**. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

Pimco Short-term High Yield Corporate finds support from accumulated volume at **\$144.32** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$146.34**, **\$146.36** and **\$146.49**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.308%**

Pimco Short-term High Yield Corporate holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
