## Tech commentaries:

The **Ishares Msci Japan Sri Ucits Etf** ETF price fell by **-0.308%** on the last day (Wednesday, 26th Jun 2024) from **\$6.90** to **\$6.88**. During the last trading day the ETF fluctuated **0.400%** from a day low at **\$6.87** to a day high of **\$6.90**. The price has fallen in 6 of the last 10 days and is down by **-2.27%** for this period. Volume has increased on the last day by **185 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **187 thousand** shares were bought and sold for approximately **\$1.29** million.

The ETF is moving within a horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Ishares Msci Japan Sri Ucits Etf** ETF with a 90% probability to be traded between \$6.68 and \$7.06 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFS seldom manage to go directly from the bottom of a trend up to the top. ETFS turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Ishares Msci Japan Sri Ucits Etf** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the ETF has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$6.84** and **\$6.87**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 1.62%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Ishares Msci Japan Sri Ucits Etf** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

**Ishares Msci Japan Sri Ucits Etf** finds support from accumulated volume at \$6.88 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$6.95**, **\$7.00** and **\$7.01**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.0275** between high and low, or **0.400%**. For the last week the ETF has had daily average volatility of **0.366%**.

**Ishares Msci Japan Sri Ucits Etf** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
