MACD: **Sell**

Tech commentaries:

The **sUSD USD** stock price fell by **-0.0290%** on the last day (Thursday, 20th Jun 2024) from **\$1.00** to **\$1.00**. During the last trading day the stock fluctuated **0.0701%** from a day low at **\$1.00** to a day high of **\$1.00**. The price has been going up and down for this period, and there has been a **-0.1%** loss for the last 2 weeks. Volume fell on the last day along with the stock, which is actually a good sign as volume should follow the stock. On the last day, the trading volume fell by **-375 thousand** shares and in total, **1 million** shares were bought and sold for approximately **\$1.04** million.

The stock is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$1.00** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **sUSD USD** stock with a 90% probability to be traded between **\$0.94** and **\$1.00** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **sUSD USD** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$1.00** and **\$1.00**. A breakdown below any of these levels will issue sell signals. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Friday, June 07, 2024**, and so far it has fallen **-0.241%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this stock may have low liquidity in periods, which increases the general risk.

sUSD USD finds support from accumulated volume at **\$1.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$1.00**, **\$1.00** and **\$1.00**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **\$0.0007** between high and low, or **0.0701%**. For the last week the stock has had daily average volatility of **0.194%**.

sUSD USD holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
