Tech commentaries:

No changes to the price of **Carrols Restaurant Group** stock on the last trading day (Friday, 3rd May 2024). During the last trading day the stock fluctuated **0.210%** from a day low at **\$9.52** to a day high of **\$9.54**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock is moving within a narrow and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Carrols Restaurant Group** stock with a 90% probability to be traded between \$9.59 and \$9.62 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Carrols Restaurant Group** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$9.51** and **\$9.50**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). The volume rose on the last day while price remained unchanged. This may be an early warning and the stock should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, May 02, 2024**, and so far it has fallen 0%. Further fall is indicated until a new bottom pivot has been found.

Carrols Restaurant Group finds support from accumulated volume at \$9.51 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.0200** between high and low, or **0.210%**. For the last week the stock has had daily average volatility of **0.189%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Carrols Restaurant Group** stock to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
