Tech commentaries:

No changes to the price of **360 Capital Enhanced Income Fund** trust on the last trading day (Friday, 28th Jun 2024). During the last trading day the trust fluctuated **2.64%** from a day low at **\$5.31** to a day high of **\$5.45**. The price has risen in 5 of the last 10 days and is up by **4.61%** over the past 2 weeks.

The trust lies in the upper part of a narrow and weak rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break-up at the top trend line at **\$5.46** will firstly indicate a stronger rate of rising. Given the current short-term trend, the trust is expected to rise **5.82%** during the next 3 months and, with a 90% probability hold a price between **\$5.51** and **\$5.77** at the end of this 3-month period.

The **360 Capital Enhanced Income Fund** trust holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$5.35** and **\$5.25**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the trust should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, June 27, 2024**, and so far it has fallen 0%. Further fall is indicated until a new bottom pivot has been found.

360 Capital Enhanced Income Fund finds support from accumulated volume at \$5.30 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the trust may perform very well during the next couple of days.

In general the trust tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the trust moved **\$0.140** between high and low, or **2.64%**. For the last week the trust has had daily average volatility of **2.11%**.

360 Capital Enhanced Income Fund holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this trust since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
