The price has fallen in 6 of the last 10 days and is down by **-2.43%** for this period. Volume has increased on the last day by **37 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **162 thousand** shares were bought and sold for approximately **\$2.21 million**.

Given the current short-term trend, the stock is expected to rise **3.24%** during the next 3 months and, with a 90% probability hold a price between **\$14.10** and **\$15.83** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$14.06** and **\$14.30**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, March 14, 2024**, and so far it has fallen **-9.42%**. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

Transcontinental Inc. Class A finds support from accumulated volume at \$13.53 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$13.67**, **\$13.70** and **\$15.08**.

Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.
