## Tech commentaries:

The **Toronto Dominion Bank (The)** stock price fell by **-5.89%** on the last day (Friday, 3rd May 2024) from **\$58.08** to **\$54.66**. It has now fallen 5 days in a row. During the last trading day the stock fluctuated **8.21%** from a day low at **\$54.12** to a day high of **\$58.56**. The price has fallen in 6 of the last 10 days and is down by **-5.9%** for this period. Volume has increased on the last day by **2 million** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **8 million** shares were bought and sold for approximately **\$421.52** million.

The stock has broken the falling short-term trend down. Firstly a stronger fallrate is indicated, but false breaks and "sell-off" may occur. However, a further fall is realistic and any reactions back to the breaking point (**\$55.73**) are considered to be a "second chance" to get out. According to the fan-theory **\$52.23** will represent the new bottom line of the next trend, but it is far too early to say this for certain.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Toronto Dominion Bank (The)** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$58.37** and **\$58.77**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Friday, April 26, 2024**, and so far it has fallen - 7.95%. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. On the upside the stock meets some resistance from accumulated volume at **\$58.77**, **\$59.32** and **\$59.82**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$4.45** between high and low, or **8.21%**. For the last week the stock has had daily average volatility of **2.67%**.

**Toronto Dominion Bank (The)** holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Strong Sell Candidate**
