The stock lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **27.20%** during the next 3 months and, with a 90% probability hold a price between **16.90€** and **19.45€** at the end of this 3-month period.

Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **14.19€** and **13.52€**. A breakdown below any of these levels will issue sell signals. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

On the downside, the stock finds support just below today's level from accumulated volume at **12.32€** and **11.94€**. On the upside the stock meets some resistance just above today's level from accumulated volume at **14.68€**, **14.74€** and **14.80€**.
