Volume fell on the last day by **-185 thousand** shares and in total, **4 million** shares were bought and sold for approximately **\$170.74 million**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

Given the current short-term trend, the stock is expected to rise **7.15%** during the next 3 months and, with a 90% probability hold a price between **\$38.70** and **\$42.84** at the end of this 3-month period.

Mostly positive signals in the chart today. The **Truist Financial Corporation** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **\$38.24**. On a fall, the stock will find some support from the long-term average at approximately **\$37.38**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. A buy signal was issued from a pivot bottom point on **Tuesday, April 30, 2024**, and so far it has risen 1.33%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.
