Tech commentaries:

The **Direxion Daily 20+ Year Treasury Bull 3X** ETF price gained **1.57%** on the last trading day (Friday, 26th Apr 2024), rising from **\$43.29** to **\$43.97**. During the last trading day the ETF fluctuated **1.52%** from a day low at **\$43.83** to a day high of **\$44.50**. The price has fallen in 7 of the last 10 days and is down by **-7.35%** for this period. Volume fell on the last day by **-3 million** shares and in total, **3 million** shares were bought and sold for approximately **\$144.80** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the lower of a wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at \$43.10 is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the ETF is expected to fall **-18.63%** during the next 3 months and, with a 90% probability hold a price between **\$35.07** and **\$41.76** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Thursday, April 25, 2024**, and so far it has risen 1.57%. Further rise is indicated until a new top pivot has been found. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The ETF should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Direxion Daily 20+ Year Treasury Bull 3X** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$44.63** and **\$49.99**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Direxion Daily 20+ Year Treasury Bull 3X finds support from accumulated volume at \$43.29 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$45.25**, **\$47.46** and **\$54.63**.

This ETF may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this ETF is considered to be "high risk". During the last day, the ETF moved **\$0.665** between high and low, or **1.52%**. For the last week, the ETF has had daily average volatility of **2.15%**.

Direxion Daily 20+ Year Treasury Bull 3X holds several negative signals and is within a wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Strong Sell to a Sell candidate.

Risk: High

Evaluation: Sell Candidate
