Tech commentaries:

The **Motley Fool 100 Index** ETF price gained **0.98%** on the last trading day (Tuesday, 2nd Jul 2024), rising from **\$54.19** to **\$54.72**. During the last trading day the ETF fluctuated **1.39%** from a day low at **\$53.97** to a day high of **\$54.72**. The price has been going up and down for this period, and there has been a 1.22% gain for the last 2 weeks. Volume fell on the last day by **-25 thousand** shares and in total, **52** thousand shares were bought and sold for approximately **\$2.82** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the middle of a strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **13.70%** during the next 3 months and, with a 90% probability hold a price between **\$59.28** and **\$63.73** at the end of this 3-month period.

The **Motley Fool 100 Index** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$54.01** and **\$52.14**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, April 19, 2024**, and so far it has risen 17.20%. Further rise is indicated until a new top pivot has been found. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The ETF should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

On the downside, the ETF finds support just below today's level from accumulated volume at **\$51.32** and **\$49.89**. There is no resistance from accumulated volume above today's level and given the right condition the ETF may perform very well during the next couple of days.

This ETF is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the ETF moved **\$0.750 (1.39%)** between high and low. For the last week, the ETF has had daily average volatility of **1.07%**.

Motley Fool 100 Index holds several positive signals and is within a strong rising trend. As the old saying says, "Let the trend be your friend." We therefore consider it to be a good choice at these current levels and we are expecting further gains during the next 3 months. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Buy to a Strong Buy candidate.

Risk: Low

Evaluation: Strong Buy Candidate
