## Tech commentaries:

The **TORM PLC Class A** stock price gained **2.19%** on the last trading day (Thursday, 2nd May 2024), rising from **\$33.82** to **\$34.56**. During the last trading day the stock fluctuated **2.57%** from a day low at **\$33.85** to a day high of **\$34.72**. The price has risen in 8 of the last 10 days and is up by **7.43%** over the past 2 weeks. Volume fell on the last day by **-60 thousand** shares and in total, **450 thousand** shares were bought and sold for approximately **\$15.54** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$34.86** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **TORM PLC Class A** stock with a 90% probability to be traded between **\$32.51** and **\$35.17** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **TORM PLC Class A** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$34.24** and **\$34.27**. A breakdown below any of these levels will issue sell signals. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, April 29, 2024**, and so far it has fallen **-0.80%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

**TORM PLC Class A** finds support from accumulated volume at **\$33.76** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$34.58**, **\$35.33** and **\$36.20**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.87** between high and low, or **2.57%**. For the last week, the stock has had daily average volatility of **1.85%**.

**TORM PLC Class A** holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: **Medium**

Evaluation: **Sell Candidate**
