The price has risen in 6 of the last 10 days and is up by **3.13%** over the past 2 weeks. The ETF lies in the middle of a weak rising trend in the short term and a further rise within the trend is signaled. The **SSgA SPDR s Europe I Public Ltd Co** - ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£72.55** and **£71.06**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, May 16, 2024**, and so far it has fallen - **0.178%**. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk.

**SSgA SPDR s Europe I Public Ltd Co** - finds support from accumulated volume at **£72.50** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **£73.02**.
