Tech commentaries:

The **Us Solar Fund Plc** trust price gained **5.26%** on the last trading day (Friday, 28th Jun 2024), rising from **£36.10** to **£38.00**. During the last trading day the trust fluctuated **0.556%** from a day low at **£37.79** to a day high of **£38.00**. The price has been going up and down for this period, and there has been a **-3.18%** loss for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **353** more shares were traded than the day before. In total, **353** shares were bought and sold for approximately **£13.41** thousand.

The trust lies in the middle of a wide and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the trust is expected to rise **5.45%** during the next 3 months and, with a 90% probability hold a price between **£38.11** and **£43.92** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Monday, June 24, 2024**, and so far it has risen 5.56%. Further rise is indicated until a new top pivot has been found. **Us Solar Fund Plc** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Us Solar Fund Plc** trust holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the trust giving a more negative forecast for the stock. On further gains, the trust will meet resistance from the long-term Moving Average at **£38.67**. On a fall, the trust will find some support from the short-term average at **£37.10**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Us Solar Fund Plc finds support from accumulated volume at **£37.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the trust meets some resistance just above today's level from accumulated volume at **£38.50**, **£38.71** and **£39.25**.

This trust has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the trust moved **£0.210** between high and low, or **0.556%**. For the last week, the trust has had daily average volatility of **4.43%**.

Us Solar Fund Plc holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this trust since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
