## Tech commentaries:

The **Vanguard Balanced Portfolio** ETF price fell by **-0.483%** on the last day (Thursday, 23rd May 2024) from **\$31.04** to **\$30.89**. During the last trading day the ETF fluctuated **0.713%** from a day low at **\$30.86** to a day high of **\$31.08**. The price has risen in 5 of the last 10 days and is up by **0.49%** over the past 2 weeks. Volume has increased on the last day by **34 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **100** thousand shares were bought and sold for approximately **\$3.10** million.

The ETFs are at the upper part of a narrow and horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$31.10** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Vanguard Balanced Portfolio** ETF with a 90% probability to be traded between **\$30.29** and **\$31.36** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Vanguard Balanced Portfolio** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **\$30.97**. On a fall, the ETF will find some support from the long-term average at approximately **\$30.49**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, May 21, 2024**, and so far it has fallen -0.643%. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the ETF should be followed more closely.

**Vanguard Balanced Portfolio** finds support from accumulated volume at **\$30.67** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$30.93**, **\$30.98** and **\$31.00**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.220** between high and low, or **0.713%**. For the last week the ETF has had daily average volatility of **0.323%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Vanguard Balanced Portfolio** ETF to perform well in the short-term period.

**Risk:** Low

**Evaluation:** Buy Candidate
