Tech commentaries:

The **Simplify Volt RoboCar Disruption and** ETF price gained **0.601%** on the last trading day (Tuesday, 25th Jun 2024), rising from **$10.81** to **$10.88**. During the last trading day the ETF fluctuated **0.334%** from a day low at **$10.84** to a day high of **$10.88**. The price has risen in 6 of the last 10 days and is up by **2.69%** over the past 2 weeks. Volume fell on the last day by **-6 thousand** shares and in total, **604** shares were bought and sold for approximately **$6.57** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the middle of a wide and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **9.03%** during the next 3 months and, with a 90% probability hold a price between **$10.64** and **$12.18** at the end of this 3-month period.

The **Simplify Volt RoboCar Disruption and** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **$10.90**. On a fall, the ETF will find some support from the long-term average at approximately **$10.47**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, June 18, 2024**, and so far it has fallen -2.13%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

Simplify Volt RoboCar Disruption and finds support from accumulated volume at $10.81 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **$10.88**, **$10.95** and **$11.03**.

In general the ETF tends to have controlled movements and therefore the general risk is considered low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **$0.0362** between high and low, or **0.334%**. For the last week the ETF has had daily average volatility of **1.12%**.

Simplify Volt RoboCar Disruption and holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: Low

Evaluation: Hold/Accumulate
