Tech commentaries:

The **Vanguard Ftse 250 Ucits Etf** ETF price fell by **-1.00%** on the last day (Tuesday, 25th Jun 2024) from **37.41€** to **37.03€**. During the last trading day the ETF fluctuated **0.86%** from a day low at **37.03€** to a day high of **37.35€**. The price has been going up and down for this period, and there has been a **-1.07%** loss for the last 2 weeks. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-416** shares and in total, **4** thousand shares were bought and sold for approximately **132.98€** thousand.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **36.89€** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **7.14%** during the next 3 months and, with a 90% probability hold a price between **39.53€** and **41.68€** at the end of this 3-month period.

There are few to no technical positive signals at the moment. The **Vanguard Ftse 250 Ucits Etf** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **37.09€** and **37.50€**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Monday, June 03, 2024**, and so far it has fallen **-3.15%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk.

Vanguard Ftse 250 Ucits Etf finds support from accumulated volume at **36.88€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **37.20€**, **37.60€** and **38.08€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.320€** between high and low, or **0.86%**. For the last week the ETF has had daily average volatility of **0.653%**.

The Vanguard Ftse 250 Ucits Etf ETF holds several negative signals and despite the positive trend, we believe **Vanguard Ftse 250 Ucits Etf** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
