Tech commentaries:

The **VOO** ETF price gained **0.537%** on the last trading day (Friday, 13th Sep 2024), rising from **\$513.81** to **\$516.57**. It has now gained 5 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the ETF fluctuated **0.638%** from a day low at **\$514.24** to a day high of **\$517.52**. The price has risen in 6 of the last 10 days and is up by **0.65%** over the past 2 weeks. Volume fell on the last day by **-682 thousand** shares and in total, **3 million** shares were bought and sold for approximately **\$1.75 billion**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETFs at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$518.59** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **VOO** ETF with a 90% probability to be traded between **\$480.88** and **\$522.74** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETF seldom manage to go directly from the bottom of a trend up to the top. ETF turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are mixed signals in the ETF today. A sell signal was issued from a pivot top point on **Friday, August 30, 2024**, and so far it has fallen **-0.274%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). The **VOO** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$506.87** and **\$503.35**. A breakdown below any of these levels will issue sell signals. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The ETF should be watched closely.

On the downside, the ETF finds support just below today's level from accumulated volume at **\$489.91** and **\$479.94**. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$516.60**, **\$517.99** and **\$519.07**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$3.28** between high and low, or **0.638%**. For the last week the ETF has had daily average volatility of **1.33%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **VOO** ETF to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
