Tech commentaries:

The **Volkswagen AG** stock price gained **1.01%** on the last trading day (Friday, 24th May 2024), rising from **138.00€** to **139.40€**. During the last trading day the stock fluctuated **2.20%** from a day low at **136.40€** to a day high of **139.40€**. The price has risen in 6 of the last 10 days and is up by **3.34%** over the past 2 weeks. Volume fell on the last day by **-7 thousand** shares and in total, **24 thousand** shares were bought and sold for approximately **3.32€** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Volkswagen AG** stock with a 90% probability to be traded between **128.17€** and **148.99€** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are mixed signals in the stock today. The **Volkswagen AG** stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **140.00€**. On a fall, the stock will find some support from the short-term average at **138.83€**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. A sell signal was issued from a pivot top point on **Tuesday, May 14, 2024**, and so far it has fallen **-2.31%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

Volkswagen AG finds support from accumulated volume at **138.70€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **139.90€**, **145.25€** and **151.50€**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **3.00€ (2.20%)** between high and low. For the last week, the stock has had daily average volatility of **1.59%**.

Volkswagen AG holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Sell Candidate**
