Tech commentaries:

The **Vanguard Esg International Stock Etf** ETF price gained **0.0348%** on the last trading day (Tuesday, 25th Jun 2024), rising from **\$57.44** to **\$57.46**. During the last trading day the ETF fluctuated **0.647%** from a day low at **\$57.18** to a day high of **\$57.55**. The price has been going up and down for this period, and there has been a **-1%** loss for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **656 thousand** more shares were traded than the day before. In total, **782 thousand** shares were bought and sold for approximately **\$44.94** million.

The ETF lies in the middle of a weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **3.53%** during the next 3 months and, with a 90% probability hold a price between **\$58.28** and **\$61.67** at the end of this 3-month period.

Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Vanguard Esg International Stock Etf** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$57.59** and **\$57.90**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Friday, May 17, 2024**, and so far it has fallen **-2.20%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Vanguard Esg International Stock Etf finds support from accumulated volume at **\$57.43** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$57.64**, **\$58.05** and **\$58.55**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.370** between high and low, or **0.647%**. For the last week the ETF has had daily average volatility of **0.600%**.

Vanguard Esg International Stock Etf holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
