Tech commentaries:

The **Xtrackers (ie) Plc - Xtrackers** ETF price gained **1.05%** on the last trading day (Friday, 28th Jun 2024), rising from **15.20€** to **15.36€**. It has now gained 5 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the ETF fluctuated **1.09%** from a day low at **15.20€** to a day high of **15.37€**. The price has risen in 7 of the last 10 days and is up by **1.88%** over the past 2 weeks. Volume fell on the last day by **-12 thousand** shares and in total, **12 thousand** shares were bought and sold for approximately **185.40€** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF has broken the horizontal trend up. Breaks like this are often followed by swift and strong movements, and any correction down to the breakline at approximately **15.31€** is considered to be a "second chance" to hit a potential runner. It is, however, important that volume does follow the price as false breaks may appear and it may move back into the horizontal trend. Based on the rectangle-formation theory the ETF is predicted to reach **16.06€** sometime during the next 3 months.

The **Xtrackers (ie) Plc - Xtrackers** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **15.09€** and **15.08€**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Monday, June 17, 2024**, and so far it has risen 3.39%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

Xtrackers (ie) Plc - Xtrackers finds support from accumulated volume at **15.11€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **15.39€**, **15.45€** and **15.46€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.166€** between high and low, or **1.09%**. For the last week the ETF has had daily average volatility of **0.699%**.

Xtrackers (ie) Plc - Xtrackers holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
